

# $^1\text{H}$ NMR metabolic profiling

## Cell medium sample $^1\text{H}$ NMR profile

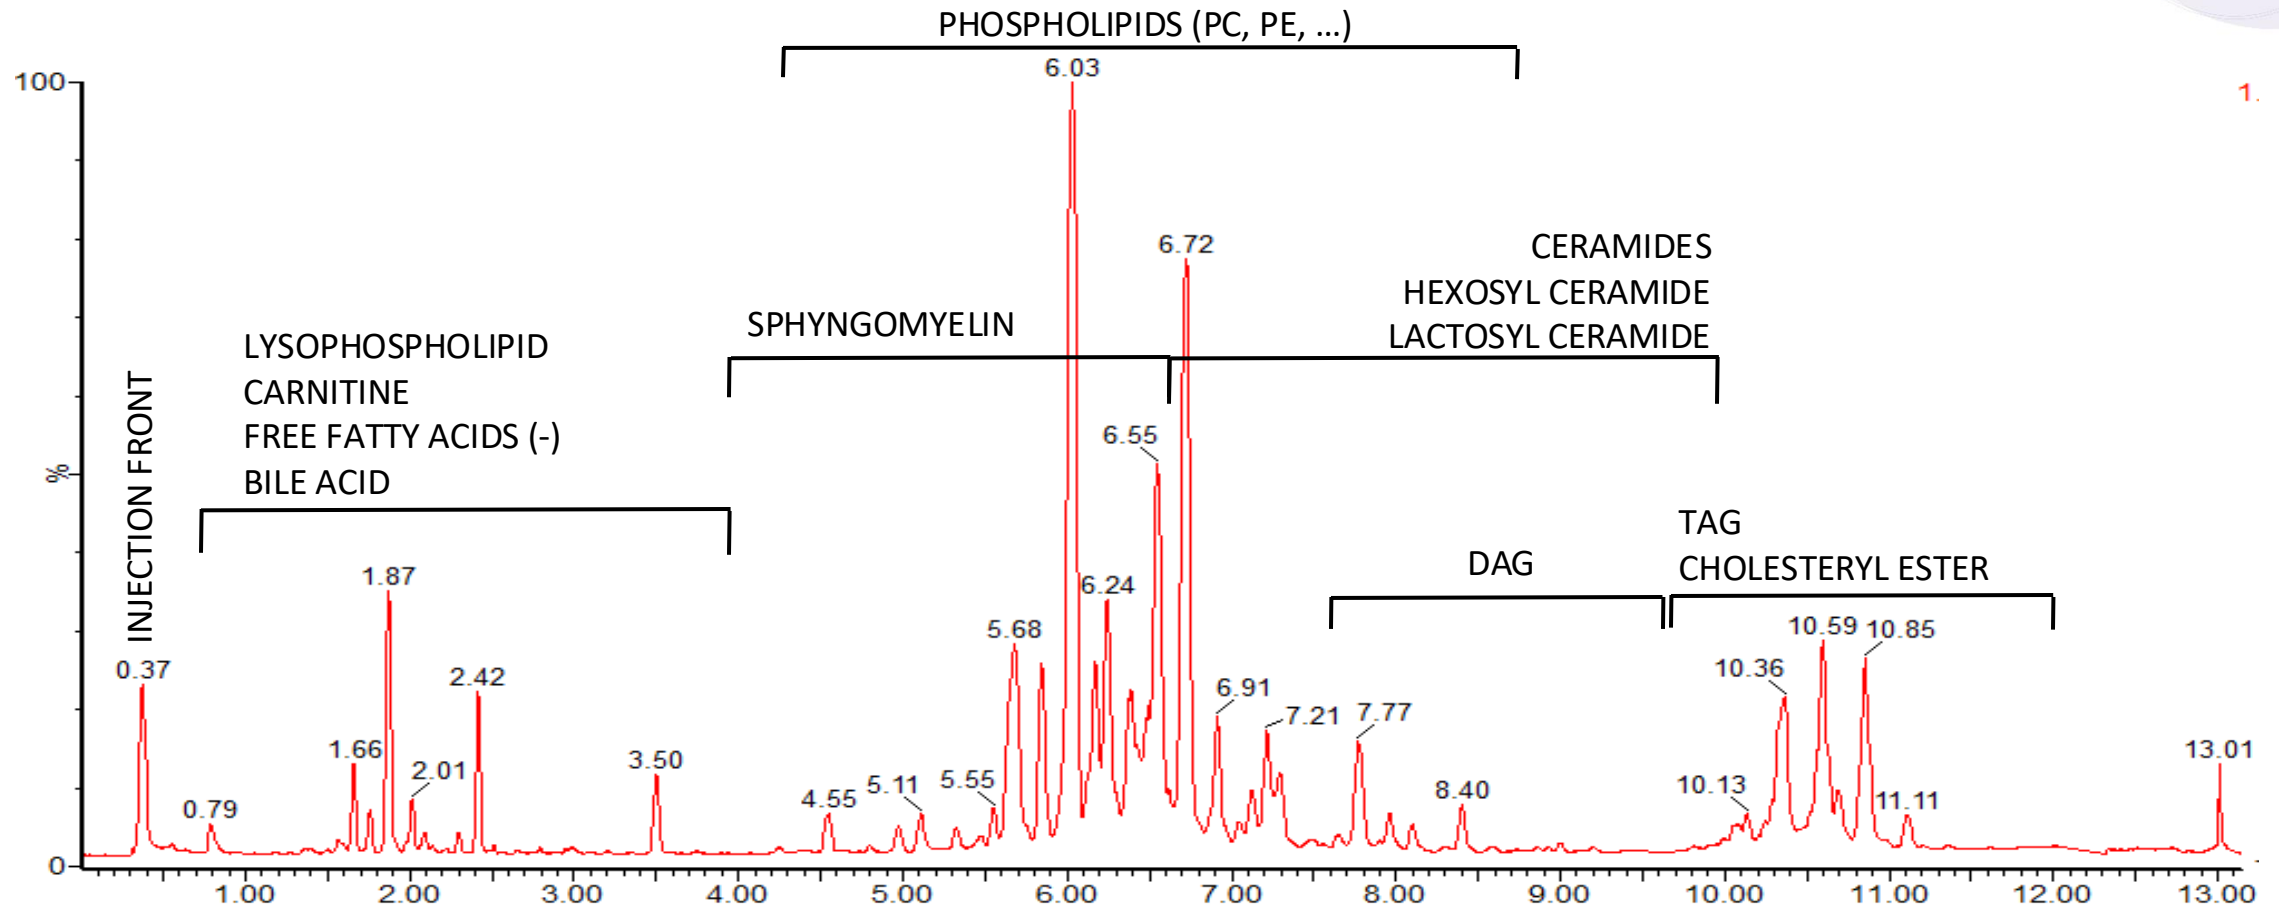

- Broad coverage of most abundant medium components.
- General profile of macro- and small molecules.
- Detailed picture of small molecule composition
- Definitive metabolite identification
- Absolute Quantification
- Highly reproducible

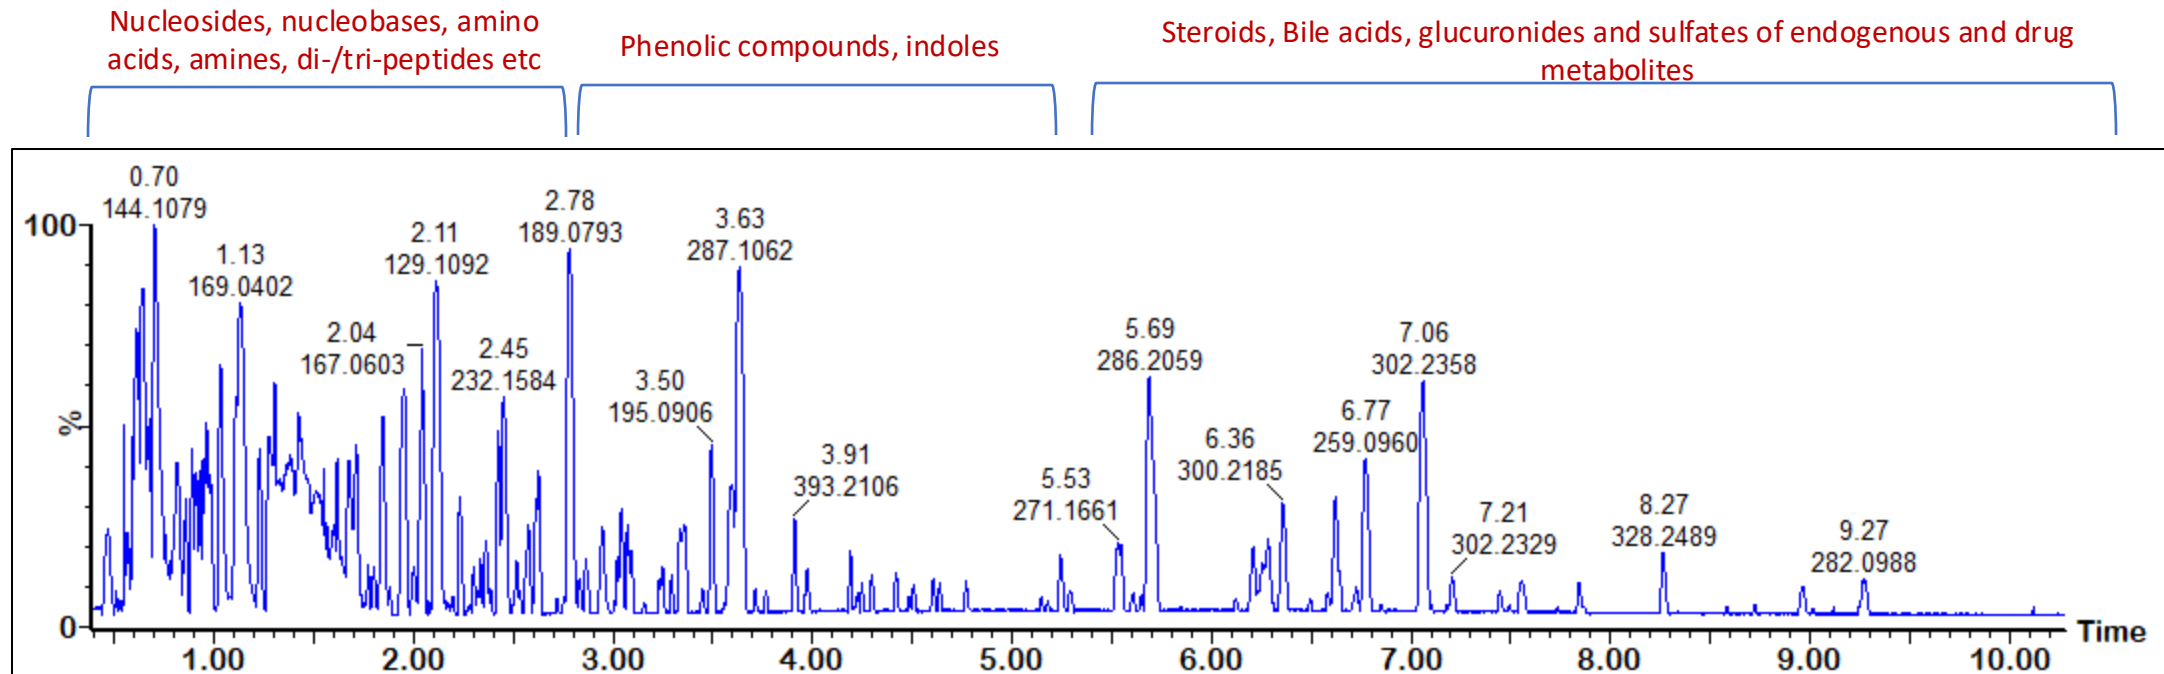

# Lipidomics platform

Standard plasma LTR BPI chromatogram obtained by LPOS/LNEG assay (after liquid-liquid extraction with IPA)

# RPOS/RNEG small molecules profiling

Standard urine LTR BPI chromatogram obtained by RPC assay tailored for small molecules in positive ionisation mode

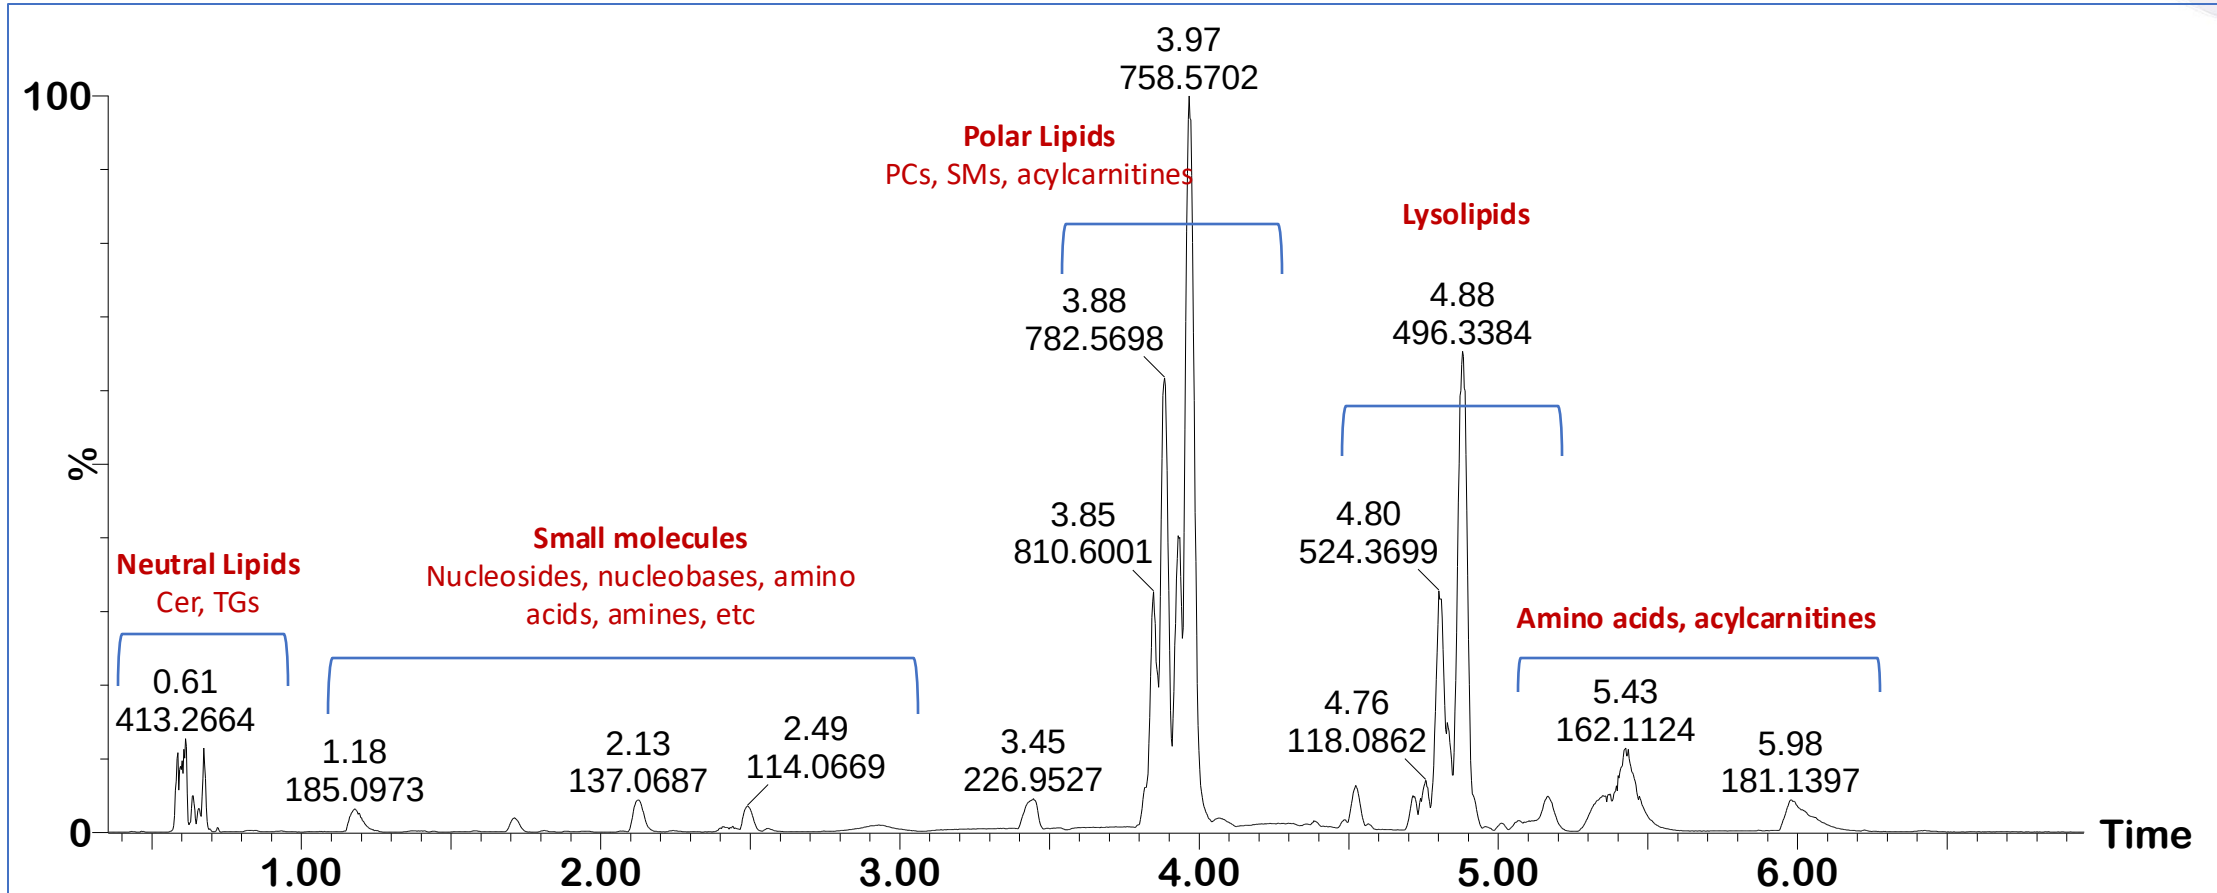

Polar metabolites

logP

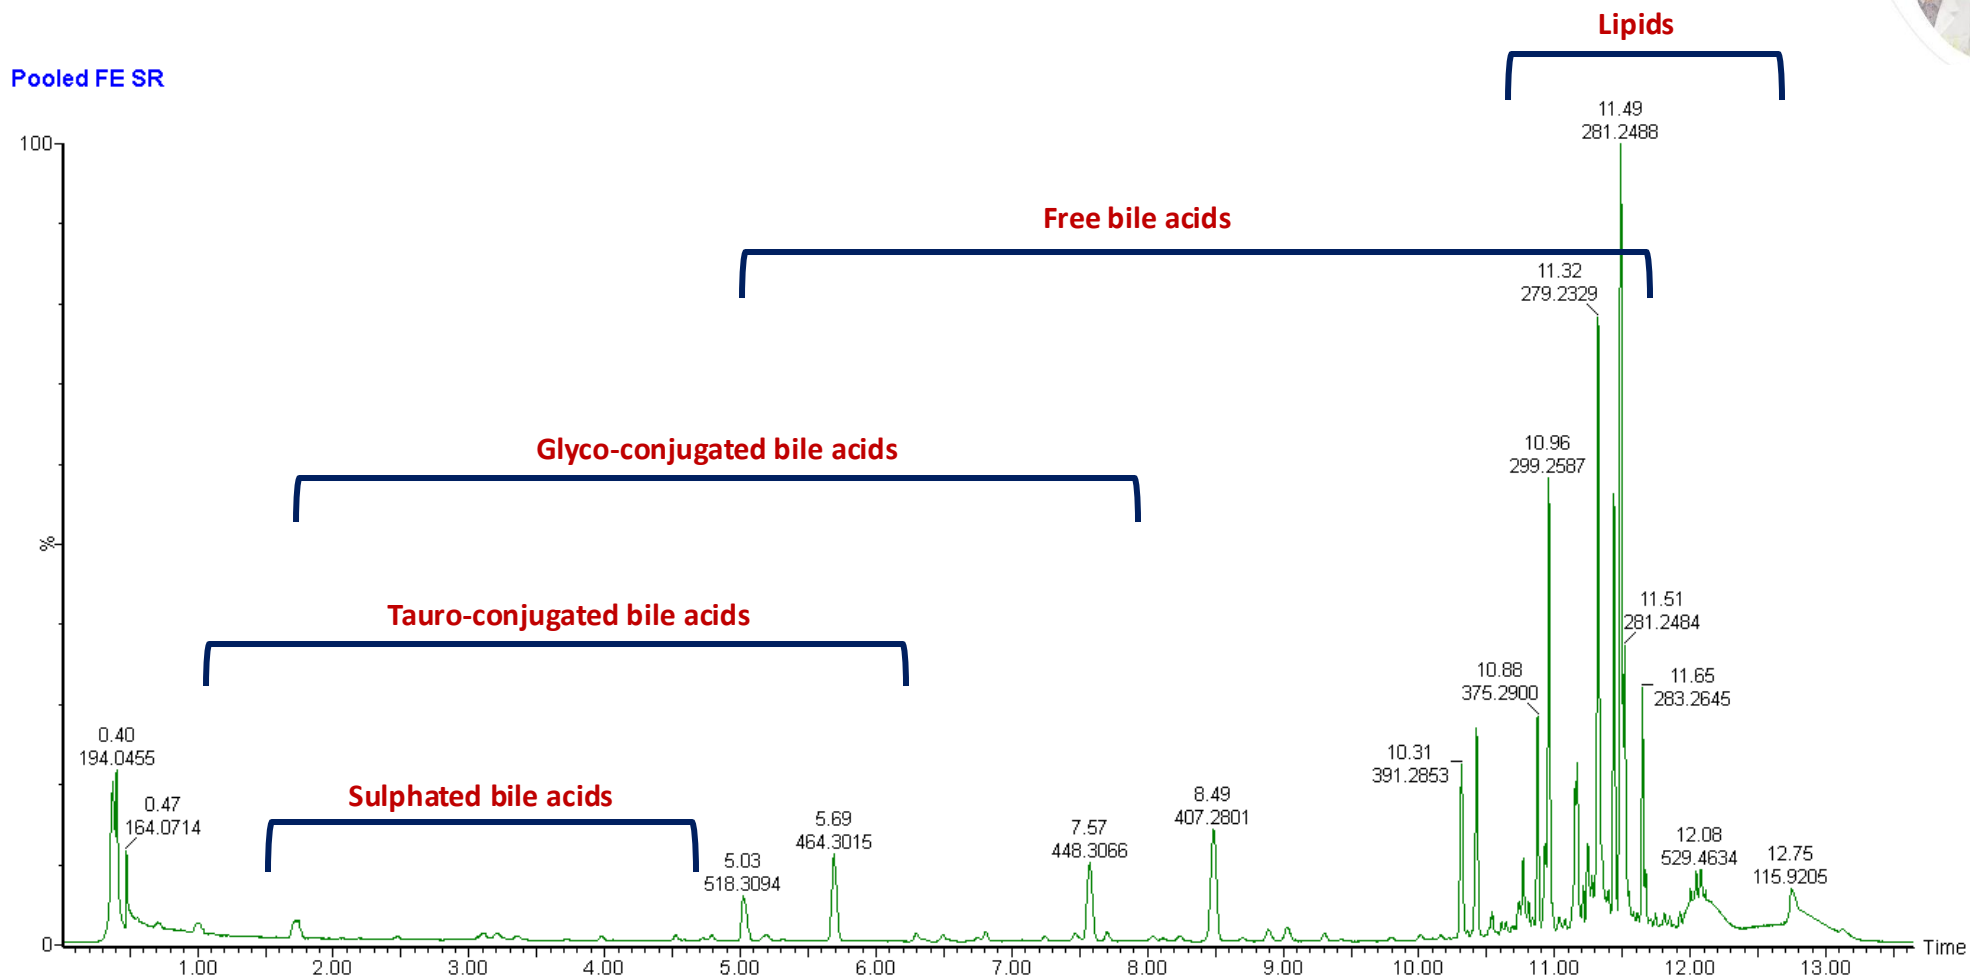

Hydrophobic metabolites

# HPOS small molecules profiling

Standard plasma LTR BPI chromatogram obtained by HPOS assay in positive ionisation mode

# Bile Acid Profiling (BANEG)

# HNEG small molecules profiling

Yeast extract BPI chromatogram obtained by HNEG assay in negative ionisation mode
